

## Firewall – How to check status and turn on/off

Press the Windows key (  ) and type 'firewall'. Windows search should come up on the right.

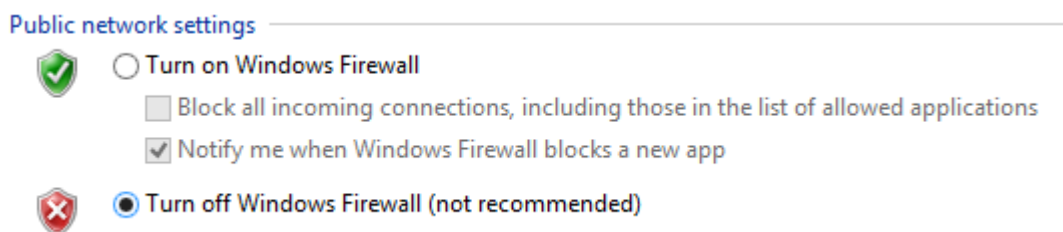

Use the cursor or keyboard arrows to select 'Windows Firewall' then click or press Enter/Return.

You should see this:

The DifferenceEngine WiFi network is likely associated by the laptop as a 'Guest or public' network. There is a 'Firewall state:' to show it is on or off for this network;

On the left side there is a pane, and click on the 'Turn windows firewall on or off' option.

You will get an option to turn the 'public' network settings firewall on or off.

Select 'off' and then click 'OK' and close the window.

You may need to restart WAMP or the laptop for the changes to take effect.
